Petition to reinstate Jensen Huang tops 65,000 signatures as investors press Nvidia's board

An open letter calling for Huang's return as Nvidia CEO, arguing he was removed "without meaningful due process," has passed 65,000 signatures, including more than 35,000 shareholders and 4,700 current and former employees, @KobeissiLetter reports. Elon Musk says he signed it and questioned the board's credibility. @GavinSBaker says Atreides sent its own letter to Nvidia's board, a first for the firm, setting out what he and @altcap call minimum acceptable standards, while also backing reinstatement pending the independent investigation. @jukan05 hears from industry insiders that rivals are already calling Nvidia's veteran engineers, many of whom stayed mainly for Huang. Overnight Starlink launch adds up to 26 Tb/s; Musk says Starship flights will carry 50+

The Starlink payload launched overnight adds up to 26 terabits per second of capacity to the constellation, and Elon Musk says future Starship flights will carry more than 50 Tb/s of Starlink bandwidth to orbit each. Separately, @mvcinvesting notes Rocket Lab completed its 100th Electron mission, the fastest commercially developed rocket to reach that mark. X @elonmusk · X @mvcinvesting

Investors buy the dip: global equity funds take in $98 billion in a week

Global equity funds drew $98 billion in the week to Nov. 11, their second-largest weekly inflow on record and fifth straight weekly intake (about $350 billion in total), @KobeissiLetter reports. The four-week average, about $75 billion, is the highest on record, versus a peak near $45 billion during the 2021 meme-stock mania; tech funds added $2.6 billion. X @KobeissiLetter

David Sacks says if Jensen was ousted for wanting to sell chips to China, it was “the stupidest, most moot hill to die on”

“They’re trying to indigenize chip production. They think it’s a critical industry, in the same way that we’re trying to get rare earths out of their clutches and get our own rare earth supply. They’re trying to create their own chip supply.” …

Fermi Terminates $6.5 billion $AMD data center

Fermi–TensorWave: $6.5 billion agreement terminated

This is the clearest cancellation.

Fermi's November 12 earnings disclosure confirms that its data-center lease with TensorWave was terminated, along with the associated AMD credit-support agreement.

The original agreement involved:

Approximately 222 MW of capacity.
Approximately $6.5 billion in anticipated revenue over 15 years.
An AMD credit-support arrangement.

$NBIS Daniel Koss Q3 Review/Revised valuation

First of all, respect to @daniel_koss for two things:

1) Being able to acknowledge the fact that he was way too bullish on Nebius in the short term. Glad he wasn't trying to talk his way out of it and just straight away admitted it.

2) The speed at which Daniel is able to produce this article is incredible. Do you do anything else? lol

Overall, I agree with most of his points; we are on the same (bullish) side when it comes to Nebius, but I would like to challenge him on a few things:

1) Investment-grade price $14.5M/MW ...

$NBIS: Explaining DataOne Winding Down Temporary Generators

In Q3 earnings call, many investors did not understand what was meant by "DataOne decided to wind down the temporary generation faster than it was expected" (1). It's not Nebius or DataOne's fault nor was it permitting issues. Let me unpack it.

@SMASIMHO was right that Vineland is a 100MW class Fuel Cell site. I thought that it couldn't be the case because 100MW of BTM electric aggregation with voltage and frequency fluctuation smoothing would take longer to build. It turns out we were both right at the same time. ...

Starter Story @starter_story · Nov 13

Bro worked the night shift at a call center and now has generated $1M+ with 8 apps and zero employees.

Meet Sanskar from Bangalore, India. He skipped college, took a call center job, then spent 8 months in sales before he started building.

He's launched 30+ products.

8 of them make money, and together they've done over $1 million.

"We have around 1000 paying customers on a monthly basis. And right now we have zero people in our team."

What the portfolio looks like:

> MagicSlides turns PDFs, docs, and YouTube videos into full presentations

> Sheet AI puts AI inside Google Sheets ...

Fred Lambert @FredLambert · Nov 13

I think this is going to be a total mess. It looks like Tesla is only doing this by invitation and delivering it in Austin to prove they can deliver an "unsupervised" vehicle in 2026.

Tesla is going to sell these to fans who are excited about owning a self-driving car, and many of them will find out the limitations aren't worth $299 a month on top of a $30,000 car. ...

Nebulizer @SMASIMHO · Nov 13

Agrippa, I've always said I'm a big fan of $IREN's greenfield first strategy.

$IREN is a pure owner operator, and that is great boon for matching long-term margin profile to long-term nature of this business.

But talking about $NBIS Vineland without the rest of the context is also too reductionist.

Yes, management needs to demonstrate that they can execute at scale for owned builds and that it will not be a DataOne story again.

But it behooves you to at least mention that the long-term build mix through 2028 for greenfield sites is 50-60% for $NBIS, and is at multi-gigawatt scale.

FROM YOUR X

Ali Ghodsi @alighodsi · Nov 13

I am 10x better at my job compared to a year ago. I run all of the company on Genie. But the reason it's really powerful is the Agentic Ontology, which is constantly being curated and evolved for the whole company. This helps our agents have much higher quality and significantly less cost. This is how it works:

Camus @newstart_2024 · Nov 14

A coroner kept seeing the same thing at autopsies: people who died of chronic disease were full of visceral fat, the fat packed around the organs. Car crash victims with clean arteries had almost none.

So why did she think she was the only doctor in the world who had noticed?

Dr. Sean O'Mara's answer is that visceral fat isn't some fringe idea. By his count there are over 25,000 published studies linking it to disease. It just rarely makes it into medical training or into a normal checkup.

That gap between what the research shows and what reaches the exam room is the real story here. You can't see visceral fat in the mirror, and a normal BMI doesn't rule it out.

The autopsy table doesn't care what's on the curriculum.

Serenity @aleabitoreddit · Nov 13

It's been overwhelmingly negative recently, but here's some perspective on how supply-constrained demand from $LITE to $MU looks amid possible AI capex slowdowns.

As one Korean executive on memory puts it:

"Thirty people are already lined up at a restaurant that is full, and five of them leaving does not create a table."

The amount of tables might expand, but supply shortages and price hikes in bottlenecks can persist through capex slowdowns or capacity buildout.

From AI implications in medicine, physics, materials, robotics, cybersecurity, engineering, energy, to AI itself over the next 5-10 years...

We've only reached the precipice of the next technological paradigm shift.

The world is going to need a lot more compute.

The World is Changing: AI For Creativity

Jeffrey Katzenberg @jeffreykWNDR

Katzenberg, who has spent his career between Hollywood and Silicon Valley, answers an animator friend who asked whether AI is "the end of us" with a firm no. He reads the creative community's resistance as love of craft, then walks through earlier technology shifts, from recorded music to sound, color and computer animation, that each grew storytelling. His case: the Valley has the new tools, Hollywood has the creative soul, and the best future draws on both.

POST · SEP 30

David Senra's conversation with Alex Taubman of Long Lake

David Senra @davidsenra

Senra talks with the co-founder of Long Lake, a three-year-old company with 30,000 employees that buys service businesses and makes them better with AI, most recently taking Amex GBT private for $6.3 billion. They cover putting engineers where the work happens, why own businesses rather than sell software, and what Henry Singleton and John Malone teach about compounding and permanent capital.

THE PASSAGE

FROM YOUR OLD QUOTE BANK

Nothing sedates rationality like large doses of effortless money.

— Warren Buffett

GAMES

MENTAL MATH

1. 28 × 8 = ?
2. 15% of 340 = ?
3. Fermi: if you drink 2 litres of water a day, roughly how many litres in 80 years?

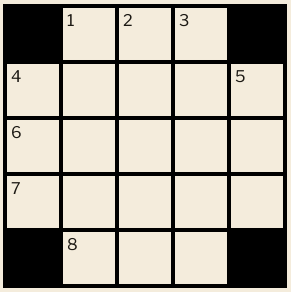

FOUR CARDS

If a day's forecast says rain, the card shows an umbrella on the back.

Snow	Rain	Umbrella	Scarf

Each card has one thing on each side. Which cards must you turn over to check the rule?

MINI CROSSWORD

Across

1 Liquor distilled from fermented molasses (3)

4 Any admirable quality or attribute (5)

6 Put up with something or somebody unpleasant (5)

7 A grammatical category of verbs used to express distinctions of time (5)

8 Actively cause something to happen (3)

Down

1 Someone who exhibits great independence in thought and action (5)

2 Liquid excretory product (5)

3 The location of something surrounded by other things (5)

4 A thick flat pad used as a floor covering (3)

5 The starting place for each hole on a golf course (3)

RIDDLE

What is full of holes but still holds water?

End of today's paper.

Covering roughly Nov 13–14, 2026. Compiled Saturday morning, ET.

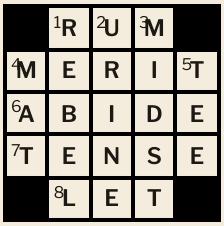

Want more or less of something tomorrow? Tell us in "Tune tomorrow's paper" at the end of the web edition.

ANSWERS

MENTAL MATH

1. **224** 28 × 8 = 20 × 8 + 8 × 8 = 224
2. **51** 10% is 34, so 15% = 1 × 34 + half of 34 = 51
3. **about 58,000 litres** 2 × 365 × 80 = 58,400

MINI CROSSWORD

FOUR CARDS

Turn Rain and Scarf. Rain could hide something that breaks the rule; Scarf breaks it if the other side turns out to be Rain. Umbrella can't break it (the rule never says only those cards have it), and Snow isn't covered by the rule at all. Most people pick the card that matches the rule's second half instead of the one that could falsify it.

RIDDLE

A sponge.
