Signal Seeker v0.5

Sunday, November 1, 2026

Boston 32° Sunny · H 58° L 29° · Mon 70°/40° · Tue 65°/53°

Election Day is Tuesday, Nov. 3. AMD reports the same day; Nebius on Nov. 12.

The AI money gets harder to raise: OpenAI cuts its round to about $20 billion

OpenAI has lowered the target for its latest funding round from $30 billion to about $20 billion, at a hoped-for valuation of $1.25 trillion, the Financial Times reported. The Wall Street Journal said about $11 billion is secured so far and described investor response as tepid; a UAE group including MGX is the largest participant, and a retail offering is planned. In the same week, Nvidia was reported to be weighing a guarantee of debt for Nscale's West Virginia data center, whose first 460 MW building is tied to a $44.6 billion Anthropic contract. CNBC (FT report) · TechCrunch · TechCrunch (Nscale)

Intel's weak outlook sets off a global chip rout

Intel shares fell about 29% on Friday, on course for the company's worst day ever, after it guided fourth-quarter revenue to $15–16 billion and adjusted earnings to $0.25 a share, well below the $17.1 billion and $0.43 analysts expected. CEO Lip-Bu Tan blamed a severe PC slowdown driven by soaring memory costs and shortages, plus an Israel fab shutdown that could cost about $600 million in revenue over two quarters. Together with worries over Amazon's spending, the warning dragged chip and memory stocks sharply lower. CNBC · CNBC (analysts) · Reuters via Investing.com

Iran threatens a response with "no geographic limits" as tankers burn in Hormuz

Iran's supreme leader vowed that any further attack would draw a response with no geographic limits, and Iran's Revolutionary Guard reported three tankers on fire in the Strait of Hormuz. AP also published an analysis of Iran's strikes on 26 U.S. bases in the region. AP · AP summary via Times Argus

My thoughts on the AI trade, mainly coming from my experience as a commercial manager.

We have over 600 customers in the 3 countries I'm responsible for. It goes from multinationals to small enterprises and family businesses.

They all feel the same thing: it is not going well

Ren @ren_stocks · Nov 1

$GOOGL $META $MSFT $SPOT

Look closely at this chart.

In software, revenue has pulled away from flat or falling headcount.

Finance and consulting aren't there yet, but Bank of America is starting to show the same gap.

It'll take longer outside tech, but this IS the trend that will keep compounding. The more companies reap the rewards of AI, the more they'll invest in it.

This is, all things considered, the most probable future. I'm investing accordingly.

x.com/ren_stocks/status/2116696215249182854

RF **Rafe Fletcher** @fletcher_rt · Nov 1

Only if we still view AI as a language-generation tool. Producing plausible but empty prose is where it is useless.

So in big businesses it amplifies bureaucracy. When busyness is how you measure utility - pointless meetings, emails etc get drawn out as it proliferates the slop.

But when you have autonomy and agency, it is fantastic. As a small business owner, I link it into Xero & CRMs, and instantly identify priorities. Embedded into email too, AI understands context and stops days becoming about clearing inboxes & helps focus on what's actually important.

AI reflects our existing structures. And where those structures are superficial, it is pain in the arse. But without those burdens, it's a brilliant leveller and dispenses with a lot of onerous crap.

x.com/fletcher_rt/status/2116811481442328900

TN **Tom Nash** @iamtomnash · Nov 1

If you want to get better returns do this exercise every time the market is red:

Every time that a stock is down, check if the business or overall fundamentals changed, or if this is just market noise.

Once you learn this way of thinking, anxiety goes away and investing becomes easy.

x.com/iamtomnash/status/2116811000120746453

Bill Ackman says Neuralink and other brain-computer interfaces will let the blind see again within "not too many years"

“And you know, my daughter, who lost pretty much basic function, ability to walk, ability to speak, ability to see, is regaining function. She’s cognitively, as far as I can tell, fine. She’s relearning how to speak, and she’s learning again how to walk. And I’m confident we’re going to get her back."

"Biggest challenge right now is that the optic nerve damage from the pressure on the brain has caused her to lose probably 98% of her vision."

"But even there I’m optimistic. Spent a lot of time in the last few months meeting with all these brain computer interface companies, obviously Neuralink being the most famous, but there’s some other very promising lower intervention technologies."

"And this will be a period, you know, AI is going to enable us. We’re going to be able to get more signal from the brain, and we’re going to be able to interpret that signal much more effectively than we had before. And the blind will see again, and people who have not been able to walk, so to speak, paraplegics, I believe will walk again. It’s a matter of not months but years, but not too many years.”

> **Fireside Alpha** @firesidealpha

THE GOATS

P **Paradis** @ParadisLabs · Oct 31

Absolutely insane...

HFs have pulled back gross exposure by ~8% -- the most aggressive de-grossing in at least ten years -- according to Morgan Stanley’s Prime Brokerage data.

In addition, TMT-focused HFs lost ~12% in October with losses concentrated in crowded Tech names --

x.com/ParadisLabs/status/2116493846745887217

INVESTMENTS

WHO PAYS FOR THE BUILDOUT

Big Tech is now competing with the Treasury for capital

On the All-In podcast, Chamath Palihapitiya and David Friedberg estimated that the financing the largest AI spenders need through 2027 could equal roughly 30% of U.S. Treasury issuance. Bill Ackman made a related case separately: he compared pure-play neoclouds to highly levered real-estate developers and expects that heavy competition for debt keeps rates high. The bull reply: judge the spend by its return, not by free cash flow

VJN Capital argues Amazon's headline free cash flow hides about $145 billion of trailing growth capex; on its "owner FCF" measure, cash generation grew 36.8%, while the cloud backlog rose 16.5% quarter on quarter and 189% year on year. Bill Ackman says Amazon, Meta and Microsoft now make up about a third of his portfolio. X @VJNCapital · X @VJNCapital · X @firesidealpha

NEOCLOUDS

Neoclouds: locked-in backlog versus spot pricing

Daniel argues CoreWeave's bigger issue is the upside it gave up by contracting capacity early: deals signed in early 2026 brought roughly $10–15 million per megawatt, while some premium contracts now reach $50 million. Nebius keeps part of its capacity for higher-priced short-term deals. Financing is the other test: Lambda, with a $50 billion backlog ($35 billion tied to Anthropic), has reportedly cut its pre-money target from $14.5 billion to $13 billion. X @danielisdizzy · X @danielisdizzy

MEMORY & CHIPS

Memory is now the most profitable business in chips

SK Hynix posted an 80% operating margin last quarter on 104.6 trillion won of revenue, above TSMC's 59%; in early 2023 its margin was minus 67%. From Nov. 1 it has a new Americas headquarters led by its HBM chief, Ahn Hyun, alongside a $4 billion packaging plant in Indiana. In Korea, chip startup FuriosaAI raised $620 million at a $2.9 billion valuation, with its next chip planned on 2 nm with HBM4. X @MilkRoadAI · X @MilkRoadAI · X @MilkRoadAI

Daniel @danielisdizzy · Oct 31

$AMD will generate more than $100B in annual revenue from server CPUs alone by 2030.

Lisa Su expects the server CPU TAM to reach $220B by 2030, with AMD capturing more than 50% of that market.

And I wouldn't be surprised if the opportunity turns out to be even bigger.

Just look at how aggressively AMD has raised its server CPU TAM projections for 2030:

• November 2025: $60B
• Q1 2026: $120B
• October 2026: $220B

$60B → $120B → $220B.

50% of $220B = $110B in annual revenue for AMD.

From CPUs alone.

And that doesn't even include the massive opportunity in GPUs.

For context, AMD generated approximately $41B in total revenue over the last 12 months.

The explosion of AI agents will unleash an unprecedented surge in CPU demand.

AI agents don't just generate responses. They execute code, interact with applications, process data, and coordinate complex workflows.

As billions of AI agents begin operating autonomously, server CPU demand will explode.

$AMD will be one of the biggest beneficiaries of the agentic AI revolution.

POSITIONING

Paradis @ParadisLabs · Oct 31

Insights from GS Prime Brokerage:

1. Info Tech was the most net-bought sector this week, driven mainly by short covers while long buys remain relatively weak.

2. Info Tech stocks are still heavily net sold MTD. This week's net-buying through to Thursday represents just ~40% of what HFs had sold in the previous 3 weeks.

3. Mag 7 stocks were net sold from Tuesday to Friday last week, highlighting risk-off sentiment.

4. Semis & Semi Equip (long buys), Software (short covers), and Tech ETFs (short covers) were the most net-bought Tech subsectors this week.

5. Goldman Sachs:
"While the directional engine of this market remains intact (token demand + GW/DC build-outs), the market has become much more discerning around the linearity of this story beyond CY27, pressuring multiples across the board until visibility improves, while investors are struggling to find names to rotate into outside of Semis/AI that are less susceptible to daily AI disruption volatility – cue names like IBM, AAPL, SPOT, V/MA, EBAY, LYV all trading well on the week/month."

x.com/ParadisLabs/status/2116639770726056322

The bear case for election week

@KevInvestingYT, a self-described AI bull, argues semis could see a sharp but short drop if Democrats sweep Tuesday's midterms. His evidence: the 10-year yield hit 5.31% on Oct. 5, the Fed hiked in September with another hike expected in December, and tech is 23.5% of Goldman's prime-brokerage book. He sees a fast repricing rather than a long bear market. X @KevInvestingYT

ELSEWHERE

China's stock slump hits a record 12 weeks while its open models spread

The CSI 300 fell for a 12th straight week, its longest losing streak on record, and lost 8.5% in October. Meanwhile U.S. app makers are building on Chinese open models (Figma on Alibaba's Qwen, Pika on MiniMax), and 17 Chinese models shipped in a single week, including Kimi K3.1 Pro. YOUR HOLDINGS

NEBIUS

Nebius: Leased 50 MW of AI data center capacity from AIB on a 12-year term, after closing a $3.5 billion, 364-day Citi credit facility for data centers and GPUs; third-quarter results are due before the open on Nov. 12. Slicast / ET Datacenters · ad-hoc-news

MICRON

Micron: Bank of America kept its Buy rating, citing multi-year take-or-pay supply agreements that cover about 35% of sales and could reach 50% by 2030; memory shares still fell with the sector after Intel's warning. ad-hoc-news · The Inference

SANDISK

SanDisk beats and raises, announces an 8-for-1 split

Fiscal first-quarter revenue was $11.0 billion, with non-GAAP earnings of $49.51 a share and $5 billion of buybacks. SanDisk guided the current quarter to $12.2–12.6 billion and announced an eight-for-one stock split effective Nov. 19. Memory shares still fell Friday on worries about Amazon and Intel. SanDisk · Trades Prophet

AMAZON

Amazon: Bedrock token volume grew about 17x and operating margin hit a record in the third quarter, with capex plans held at $220 billion. Separately, Amazon dropped its Westborough, Mass., drone-delivery plan after local pushback. Amazon Q3 release · WBUR

TECH & AI

An AI-agent hacking campaign hit 200 organizations in 11 days, CrowdStrike says

CrowdStrike says a China-linked group used AI agents, running mainly on DeepSeek, to target more than 200 organizations in 14 countries in 11 days, including 19 in the U.S. About 70% were compromised. The agents lifted the attack pace from about 40 commands an hour to more than 1,500, and one intrusion consumed about 1.4 billion tokens. X @MilkRoadAI
