Joe Hudson @FU_joehudson · Oct 9 IDEAS & LIFE

My capacity to do things went up exponentially when I started asking "How can I rest more effectively?" instead of just "How can I be more productive?"

Metabolic Psychiatry Summit is still going on!

I've shared my own story about reversing cognitive decline, apathy, and the inability to experience joy after almost a year on a therapeutic ketonic diet.

Learn about how Metabolic Lifestyle Therapies are helping reverse Mental and Neurological disorders.

40 speakers: lived-experience advocates, researchers, clinicians, authors, and professors, all in one place.

Free. Online. October 21-25.

IDEAS & LIFE

🧠 People with serious mental illness can take on and stick with ketogenic therapy, according to feasibility results from a new randomized controlled trial from researchers out of James Cook University and Townsville Hospital and Health Service

The next paper will report psychiatric, cognitive, and metabolic outcomes.

> **Baszucki Group** @BaszuckiGroup
>
> The first results from the North Queensland Dietary Intervention Trial (NQDIT) are out in Frontiers in Nutrition.
>
> This randomized controlled trial of ketogenic metabolic therapy (KMT) in schizophrenia, schizoaffective disorder and bipolar disorder was led by researchers at James Cook University and Townsville Hospital and Health Service, including Dr. Calogero Longhitano (@doncaloger0), Dr. Jaymee-Leigh Swift, Prof. Zoltan Sarnyai (@ZSarnyai) and colleagues.
>
> The feasibility study reports that KMT is a feasible and safe therapeutic dietary intervention for individuals with serious mental illness and that high adherence was achieved under real-world conditions with self-prepared meals.
>
> The psychiatric, cognitive, and metabolic outcomes will follow in a forthcoming paper.
>
> Congratulations to the NQDIT team. Baszucki Group is honored to have supported this work.
>
> Read the paper:

SCIENCE & HEALTH

Nobody talks about the fact that PCOS has subtypes.

A study of 11,908 women found 4 subtypes, each with different problems.

High androgen: highest risk of second trimester loss
Obesity: worst metabolic outcomes, with 16% developing type 2 diabetes over 6.5 years
High SHBG: mildest, with the best pregnancy outcomes
High LH and AMH: highest risk of ovarian overstimulation during IVF

The researchers used 9 measurements to decide which subtype each woman fell into. 8 were labs, including testosterone, SHBG, LH, AMH, and fasting insulin. The 9th was BMI.

Yet most women still get the same answer for all 4 types, which is birth control and "lose weight"

SCIENCE & HEALTH

Planet is building satellites that can see things invisible to the human eye.

Its 3 satellite systems can:

1. Scan the Earth's entire landmass every day

2. Eventually deliver an image of anywhere on Earth, analyzed in just 30 minutes

3. Use 420 color bands to identify camouflage, distinguish tree species, and even detect invisible methane leaks from space

"If there's a gas leak, you can literally see the gas."

— Planet CEO Will Marshall (@Will4Planet)

BUILDING & MAKING

Props to the Japanese for building something you can easily work on.
Hands down the best designed skid loader ever built. oh and I forgot to mention, this has no def. def is a scam, fuck def.
and I have no idea why it doesn't have def.
just for reference, this is a kabota 65-2

Austin Tunnell @AustinTunnell · Nov 5

BUILDING & MAKING

The most fun part of development is bringing a real vision to life. It's not just pretty pictures, but real buildings and places for people to use and love.
