CoreWeave: customers now prepay up to 100%, and demand runs 10x capacity

CoreWeave's Q3 call said customers are now funding up to 100% of contract value upfront, with qualified demand about ten times available capacity through 2027 and 2028 interest already several times what it has. @aleabitoreddit added that older Ampere and Hopper rental prices rose 30-50% quarter over quarter; @GavinSBaker says the shift from offtake financing to prepayments makes operating cash flow to EBITDA the metric that matters and shortens GPU payback. The stock rose more than 16% overnight. X @mvcinvesting · X @aleabitoreddit · X @GavinSBaker · X @KobeissiLetter

TSMC calls leading-node demand "insatiable"

Quoting TSMC at the Nikkei Forum, @aleabitoreddit reports the company sees no sign of an AI slowdown, says demand is still far above what it can supply, and names power and substrates as customers' bottlenecks. On its mid-to-high-50s growth estimate for AI accelerator revenue through 2029, C.C. Wei said it "probably will be higher." X @aleabitoreddit

Nvidia erases Tuesday's drop amid the Huang story

@KobeissiLetter reports Nvidia rose more than 6% as investors bought the dip, erasing the prior day's decline tied to the Jensen Huang reporting, while Nasdaq 100 futures climbed about 1.5% on CoreWeave's results. X @KobeissiLetter · X @KobeissiLetter

SpaceX is building Kessel, a custom Vera Rubin rack for Earth and orbit

@SemiAnalysis_ says SpaceX is developing Kessel, a custom Vera Rubin NVL72 rack that swaps the internal NVLink cable cartridges for a passive PCB midplane, keeping 72 GPU packages, 18 compute trays and 9 switch trays arranged back-to-back. It is designed for both terrestrial and orbital deployment; the open question is whether the smaller design makes a midplane practical. X @SemiAnalysis_

Wait, you're kidding me, right? 😂

For a year the bears wanted us to believe GPUs are worthless after 2 or 3 years.

Now $CRWV says 300,000+ GPUs come off contract in 2027 and 2028, and pricing for those GPUs rose 50% quarter over quarter.

Apparently many investors are surprised... ??

What did they think would happen? That CoreWeave throws paid-off GPUs in the trash?

Lost for words 🤣

$CRWV Q3 Earnings Recap is out!

Very telling for $NBIS print this Thursday.

For those of you that missed it ⬇
1. Profitable in 2028
2. 10X demand vs. 2027 supply
3. 100% customer prepayments
4. $20-25MM/MW/YR 5-Year contracts
5. Customer renewal upside opportunity
6. International Expansion
7. Tightening Payback Periods

The Humanoid Hub @TheHumanoidHub · Nov 10

First time in a Cybercab

No steering wheel ✅
Very comfortable seat and cabin ✅
Smooth ride ✅

They’re everywhere in Austin, you can’t pass a block in the downtown without seeing at least one.

A vision-based, safety-critical robotics system working at scale. What a time to be alive!!

x.com/TheHumanoidHub/status/2120362083959140663

M. V. Cunha @mvcinvesting · Nov 11

AI bears went from:

“Funding is drying up! There’s no way to finance the AI buildout!”

To:

“100% customer prepayments are terrible!”

You really can’t make this stuff up.

x.com/mvcinvesting/status/2120474532771193257

Paul Millerd @p_millerd · Nov 10

I find the whole FIRE world interesting. In a world where many assume work is a non-stop part of life, they tend to be the most creative in terms of redesigning the life path.

I've been working on better FIRE calculators too, including something im coining "Pathless FIRE"

A big issue with FIRE is that it designs everything around never earning money again. That is rarely the reality. ...

> **Paul Millerd** @p_millerd
> I've invented pathless fire, for the people that actually want to keep working on stuff they enjoy and dont want to escape work try out the...

$CRWV Prepayment is Stronger than $IREN's

Reading carefully "100% of the contract value upfront" as pointed by @_Sgr_A_Star means not only GPU capex but DC colocation (CRWV uses mostly colo) value over the duration of contract and the profit margin.

This is much stronger than IREN's 90% of GPU Capex which is around 65% of total contract value.

Hope $IREN steps it up for set of contracts on either the prepayment front or economics.

Ex-Tesla President Jon McNeill reveals Elon Musk's idea for Neuralink started in the back of a Model S in Hong Kong, with Elon asking how fast he could type.

Elon Musk then asked for the top brain-computer interface researchers' papers on the spot, and met them the next week:

"Elon and I were traveling together to China. We just landed in Hong Kong. We're in the back of a Model S, and we're both catching up on our inbox on our phones. And he looks over at me and says, how fast can you type with your thumbs?"

"And I said, I have no idea. I've never timed it. He's like, well, the average human's 18 words a minute. He said, how fast can you type on a keyboard? I said, I think it's like 60 or 70 words a minute. So let's call it 60."

"He said, exactly. So you are more than three times faster on the keyboard than you are on your phone. This device has slowed the input into the machine. And he's like, that's a big deal, because you can't get speed of answers and decision making if you're going three times slower."

"He's like, what if you could think into the machine? I was like, well, that would blow this constraint away, because now we don't have keyboards and thumbs to go through. You're thinking in real time into the machine. He's like, exactly. That would pull the front-end constraint off of the compute for humans. That's a big deal."

"So he didn't sit on these ideas. He's very unique in this way. And he said to his chief of staff, Sam Teller, who's in the front seat: Sam, can you track down the top neuro computer science interface researchers in the world? Get their papers."

"I want to read the papers while we're here in China and on the flight back, and I want to meet with these people next week, because I want to start to work on brain-computer interface. And just like that, fast."

"So by the next week, he's meeting with some of the top minds in the world on this topic, and he doesn't let go until he starts Neuralink."

> **Fireside Alpha** @firesidealpha
> Bill Ackman says Neuralink and other brain-computer interfaces will let the blind see again within "not too many years" "And you know, my…

HubSpot co-founder and CTO Dharmesh Shah says it's less scary to build an AI startup now than in 2023, as long as you stay off the Yellow Brick Road the frontier labs are following:

"The frontier model companies have invested hundreds of billions of dollars building, doing the pre-training. And so their whole business effectively now is taking the capex that they've spent and the money they're continuing to spend and saying, 'How do we sell inference? How do we sell tokens? How do we monetize the thing that we've built?'"

"There are SaaS companies and startups that know their particular domain, know their market, have some distribution, or have something that allows them to sell tokens and be a reseller of inference."

"Think of AI as infrastructure in the same way we thought of AWS and cloud infrastructure 15 years ago... I think it's less scary now to build in and around the AI arena than it was in 2023."

"We have open source. We have lots of great commercial products. So as long as you stay off the Yellow Brick Road, it is completely possible now that you're not gonna get margined out, because you have options."

@dharmesh

Jukan @jukan05 · Nov 11

Interesting remarks Anthropic made in a meeting with the sell side:

- Anthropic has the stability and the better talent that open source lacks.

- The AI market is winner take all. As long as we execute properly, we will take all of it.

- The contract with SpaceX will not be extended beyond the middle of next year.

- Developing Opus 5.5 cost more than $10 billion.

INVESTMENTS

NEOCLOUDS

Kyle Reidhead | Milk Road @KyleReidhead · Nov 10

The part everyone is missing from $CRWV earnings is...

Management said they have 130,000 GPUs coming off contract in 2027 and another 170,000 in 2028

If they re-contract that at today's prices its ~$10 BILLION in annualized revenue from compute that is already FULLY paid off

This completely changes the financial outlook for the company

The market is used to every contract coming with additional capex and debt, but starting next year CoreWeave will have contracts with no Capex or debt, just pure profit (for the most part)

Game changer for the business that the market is not pricing today

> **Kyle Reidhead | Milk Road** @KyleReidhead
> Just listened to the CoreWeave earnings call It's clear the demand for compute is only accelerating with no end in sight They are now...

x.com/KyleReidhead/status/2120322446322499716

Oguz Erkan @oguzerkan · Nov 11

This is probably the most bullish signal for neoclouds like $CRWV and $NBIS.

At the beginning of the year, neocloud long-term contract prices were around $10 million per MW, while short-term, large-scale prices were around $40 million per MW.

The thesis was that high short-term prices would inevitably raise long-term pricing, which was an optionality the market didn't price for neoclouds.

We are seeing this play out as $CRWV long-term pricing effectively doubled this year. It's not a thesis anymore; it's the reality, but the market still hasn't priced it.

Couldn't be more bullish.

x.com/oguzerkan/status/2120466226807779805

EVERGREEN

POST · AUG 31

The last time @GavinSBaker and I sat down to record a podcast

David George @DavidGeorge83

David George recaps his second a16z conversation with Gavin Baker on where the AI cycle stands. Baker has spent the summer asking operators for one metric that is getting worse and has not found one, while AI revenue still rests on fewer than 10 million heavy users against roughly 1.5 billion knowledge workers. The argument: supply is short and the market is positive-sum, with room for labs, open models, clouds, enterprises and apps to win.

x.com/DavidGeorge83/status/2094452892526870713

POST · NOV 2

Gavin Baker on orbital compute

Invest Like the Best @InvestLikeBest

Gavin Baker argues data centers in space are the most important thing of the next three to four years: constant sun means no batteries and cooling is free. He points to SpaceX's GPU clusters, share of mass to orbit and constellation, and estimates Starship could lift 10 to 15 megawatts to sun-synchronous orbit per flight.

THE PASSAGE

I will have to remember 'I am here today to cross the swamp, not to fight all the alligators.'

— Rosamund and Benjamin Zander, The Art of Possibility, *Featured in Tim Ferriss's 5-Bullet Friday ("30 Quotes I'm Pondering and Revisiting")*

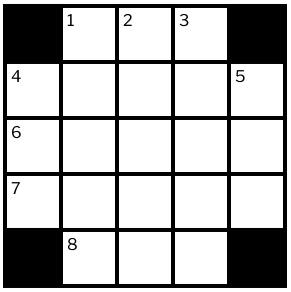

tim.blog/2022/02/21/tim-ferriss-favorite-quotes/

GAMES

MENTAL MATH

1. 20 × 9 = ?
2. 45% of 200 = ?
3. Fermi: a resting heart beats about 70 times a minute. Roughly how many beats in a year?

MINI CROSSWORD

Across

1 A flat wing-shaped process or winglike part of an organism (3)
4 Fear resulting from the awareness of danger (5)
6 A fashion reminiscent of the past (5)
7 A step in walking or running (5)
8 Make an effort or attempt (3)

Down

1 Condition of heightened watchfulness or preparation for action (5)
2 Coming at a subsequent time or stage (5)
3 An impressive display (5)
4 The creation of beautiful or significant things (3)
5 Relating to a recently developed fashion or style (3)

FOUR CARDS

If a card is red on one side, it has a circle on the other.

Red	Circle	Triangle	Green

Each card has one thing on each side. Which cards must you turn over to check the rule?

RIDDLE

What belongs to you, but other people use it more than you do?

End of today's paper.

Covering roughly Nov 10–11, 2026. Compiled Wednesday morning, ET. Links are in the web edition.

ANSWERS

MENTAL MATH

1. **180** 20 × 9 = 20 × 9 + 0 × 9 = 180
2. **90** 10% is 20, so 45% = 4 × 20 + half of 20 = 90
3. **about 37 million** 70 × 60 × 24 × 365 = 36,792,000

MINI CROSSWORD

■	1 A	2 L	3 A	■
4 A	L	A	R	5 M
6 R	E	T	R	O
7 T	R	E	A	D
■	8 T	R	Y	■

FOUR CARDS

Turn Red and Triangle. Red could hide something that breaks the rule; Triangle breaks it if the other side turns out to be Red. Circle can't break it (the rule never says only those cards have it), and Green isn't covered by the rule at all. Most people pick the card that matches the rule's second half instead of the one that could falsify it.

RIDDLE

Your name.
