Microsoft ends Oracle AI cloud rental; ORCL −5% and −68% from its high

Friday, Oracle slid about 5% after Microsoft ended a deal to rent AI cloud capacity from the company, extending a brutal unwind: ORCL is now down roughly 68% from its record high. On X, @KobeissiLetter flagged the break as another leg of the AI-infra re-rating after Thursday's crash. Separately, @ParadisLabs cited Goldman data that hedge funds have been selling AI stocks at their fastest pace on record, with TMT books roughly flat year-to-date after a strong first half. X @KobeissiLetter · X @ParadisLabs

Claude @claudeai · Nov 6

Memory is what allows Claude to learn from experience. In a new Engineering Blog post, we share how "dreaming" helps Claude organize what it's learned, correct its mistakes, and find what it needs more easily the next time. https://t.co/uUEN4bNkr9

Data centers in Loudoun County, Virginia: "We get $1.2 billion a year in local tax revenue, about 40% of all of our tax revenue...on 3% of our land"

Buddy Rizer, the county's economic development chief, explained how “data center alley” grew:

“We would have never looked at having 55 million square feet of data center, 230-some buildings. That was not the plan. The plan was to utilize the fiber loop, the internet exchange, to utilize a reclaimed water line, and buildings that were already built. That was the plan, right? And so that made a lot of sense.” …

> **Fireside Alpha** @firesidealpha
> SpaceX’s Arizona data center, per a county supervisor: “We could be reducing property taxes across the board in Cochise County, the entire…

JL **Jason Luongo** @JasonL_Capital · Nov 6

This is crazy. Someone is willing to pay me $390 to agree to buy $NVDA at $150, about 20% below where it trades today.

It's called a cash-secured put, and here's how it works:

Nvidia is trading around $188. You sell the $150 put expiring January 15, 2027 and collect $3.90 per share, or $390 for one contract.

In exchange, you agree to buy 100 shares at $150 if NVDA closes below that price at expiration. You set aside $15,000 in cash to cover it, which is why it's called "cash-secured." …

x.com/ChrisCamillo/status/2118813552932700623

Paradis @ParadisLabs · Nov 6

Absolutely staggering.

HFs have been selling AI stocks at their fastest pace on record according to Goldman Sachs.

HFs have actively unwound risk in the past month.

More specifically, TMT funds are now ~flat YTD, down from roughly +24% generated in H1 before the Leopold sell-off in July.

There have been three big semis sell-offs this year: March, July, and now Oct-Nov. A lot of pain endured.

I wonder the extent of risk budget cuts at HFs?
What incentives remain for HFs to add risk so close to year end?
That said, HFs are positioned *even* lighter than a ~month ago, so a rally could force some short covering.

Feels like retail (and any buybacks) need to do the heavy lifting short-term.

x.com/ParadisLabs/status/2118774791129747711

P **Paradis** @ParadisLabs · Nov 7

Orbital data centers - coming soon to a galaxy near you!

FundaAI's bull case scenario sees SpaceX having ~1 GW of compute in space by end-2028.

Highly recommend reading the full article to get full colour on the design elements and technical constraints.

NEOCLOUDS

R **Ren** @ren_stocks · Nov 6

Citrini update on the $NBIS short, that's been so controversial.

"One quick swap we are making is $IREN for $NBIS on the short leg of the neocloud pair mostly to derisk on earnings (IREN announced and popped harder than the sector today, NBIS earnings is next week). IREN is also more stretched in balance sheet, which matters since financing reflexivity is a huge part of this."

x.com/ren_stocks/status/2118888264832541106

ROTATION

JC **James Chanos** @RealJimChanos · Nov 5

I can't shake the feeling that selling your high-beta tech stocks already down 40-70%, to buy low/no growth consumer names at 30-100x earnings...might not be so smart, either.

x.com/RealJimChanos/status/2118443546219020543

COMPUTE

Z **Zephyr** @zephyr_z9 · Nov 6

I don't think compute is a commodity.

The calorific value of gasoline or diesel is fixed.

Meanwhile, tokens generated per watt depend on so many factors (networking, PUE, the type of chip, inference framework, etc.)

Different vendors can get vastly different tokens per watt even on the same hardware for a particular model (DeepSeek's infra efficiency).

Microsoft could shift its workloads from A100s to newer hardware for multiple reasons (a new model that runs much more efficiently on Blackwell or Hopper).

> **M Corleone** @MCorleCapital
> @zephyr_z9 In shortages you secure what you can and in balanced market you take your chances with Spot and your own capacity. Oil suppliers...

Muse gets Active Memory and Active Focus model upgrades

Mark Zuckerberg said Muse and Meta AI models were upgraded with Active Memory and Active Focus from Muse Wonder. In Muse, the specialized models are 2.4× less likely to forget critical info and 67% better at self-correcting everyday tasks — fewer repeats and dead ends. X @finkd

WORTH READING

FL **Fred Lambert** @FredLambert · Nov 6

Tesla just confirmed it will end Cybertruck production in 2027. I think it's one of the best case studies we have on managing customer expectations.

Tesla received more than 1 million reservations for the Cybertruck. Our best estimate puts the real number closer to 2 million. That's demand most automakers can only dream of.

Tesla delivered about 70,000 trucks in three years.

You can point to a lot of factors: the design, the production ramp, quality issues, the brand's politics, competition. They all played a role. But they're small compared to the main one.

Tesla promised a $40,000 truck with up to 500 miles of range. It delivered an $80,000 truck with about 300 miles of range.

Those 1 million+ people didn't reserve the truck Tesla ended up building. They reserved a promise. When the product showed up at twice the price with 40% less range, most of them simply walked away.

> **Electrek.co** @ElectrekCo
> Tesla to end Cybertruck production as sales stall at ~10% of plan by @fredlambert

x.com/FredLambert/status/2118707809231532332

BUSINESS

Tesla confirms Cybertruck production ends in 2027

Fred Lambert notes Tesla confirmed Cybertruck production will end in 2027 after ~70k deliveries against 1M+ reservations. His read: the company sold a $40k/500-mile promise and delivered an $80k/~300-mile truck — a case study in managing (and missing) customer expectations ahead of Cybercab. X @FredLambert

Everyone can win: open-source, frontier labs, infra, apps

Gavin Baker @GavinSBaker

Baker's base case is a hybrid multi-model future: open-weight tokens dominate volume, frontier labs still do well, and infrastructure and applications benefit from fragmentation and lower model-layer margins. Lower model margins mechanically raise compute demand so long as someone will pay to train — and he casts Jensen as "trainer of last resort."

ANSWERS

MENTAL MATH

1. **168** 21 × 8 = 20 × 8 + 1 × 8 = 168
2. **99** 10% is 22, so 45% = 4 × 22 + half of 22 = 99
3. **about 1 m** 20 × 500 = 10,000 sheets × 0.1 mm = 1,000 mm = 1 m

MINI CROSSWORD

	1 T	2 A	3 N	
4 B	E	L	O	5 W
6 U	N	I	T	E
7 M	O	V	E	D
	8 R	E	D	

FOUR CARDS

Turn Drinking beer and Age 17. Drinking beer could hide something that breaks the rule; Age 17 breaks it if the other side turns out to be Drinking beer. Age 25 can't break it (the rule never says only those cards have it), and Drinking water isn't covered by the rule at all. Most people pick the card that matches the rule's second half instead of the one that could falsify it. Most people get this version right and the letters-and-numbers version wrong, though the logic is identical.

RIDDLE

The letter M.
