Jensen Huang resigns as Nvidia CEO, and the spy case behind it is wobbling

Huang has resigned as Nvidia's chief executive, @aleabitoreddit reported Thursday, and @DeepValueBagger notes he keeps no advisory, board or honorary role. Within hours the case against him softened: citing CNN, @KobeissiLetter reports that US intelligence officials say the evidence on Alice Huang does not prove she was spying for China, with ODNI officials calling that characterization "over-torqued" and the CIA "not yet convinced." Per WIRED, an internal Nvidia post urging the board to reinstate him has drawn more than 1,600 comments, most in support. @GavinSBaker: the board should have waited for its own investigation to finish. X @aleabitoreddit · X @KobeissiLetter · X @KobeissiLetter · X @GavinSBaker · X @DeepValueBagger

Researcher: Chinese labs' newest models were trained on export-barred Blackwell chips

@willdepue says model weights carry a fingerprint of the GPU that initialized them, and that after searching more than six trillion chip-layout and seed combinations he matched six Chinese models, including DeepSeek-V4-Pro, Kimi K3 and MiniMax-M3, to Nvidia Blackwell systems, four to Grace Blackwell racks. He says a B300 reproduced DeepSeek-V4-Flash's starting weights bit for bit while an H100 matched none, and estimates the largest runs used 2,000-3,000 Blackwell GPUs each. He says researchers at OpenAI and Anthropic independently verified the result. X @willdepue

Anthropic launches Claude Meetings

@claudeai: Claude can now join a team's video call and build docs, whiteboards and other artifacts while people are still talking. It is rolling out in beta on Team and Enterprise plans. X @claudeai

Dylan Patel says Nvidia without Jensen Huang becomes a committee that decides slowly, with no clear technical lead and a weaker hand to lock up supply below market rate

“I think that’s the biggest worry for Nvidia, is that now it’s like a committee of people doing stuff. And that’s just gonna make decisions slow. Technically, they could fall behind because of this.” …

Jukan @jukan05 · Nov 12

Nvidia chips are still scarce, even now.

But to maximize that premium, Nvidia has to support the neoclouds.

If the new Nvidia CEO turns even slightly skeptical about supporting the neoclouds, spot prices will take a hit. That will hurt neocloud margins. To avoid this, the neoclouds will have no choice but to reach out elsewhere. AMD, or the TPU camp. …

x.com/jukan05/status/2121068943704236435

Daniel Koss @daniel_koss · Nov 13

I'm going over the $NBIS earnings in great detail right now.

The full recap and outlook will be shared for free on X, as I hate paywalling articles when X is freaking out. I want to publicly address the good and the bad stuff.

It's very clear to me that 99.9% of the people on X who are dooming didn't spend any time looking at the actual results or updates we got.

There are great news and developments and also real things to be worried about and there are some bad news. …

Jim Liu @jiahanjimliu · Nov 12

$NBIS: Asset-Light Revenue

Most of X is missing the mark on why the asset-lite revenue NBIS reported today is labeled no-recurring.

I'll breakdown the explanation given in earnings call: "asset-light model. By that, we are bringing capacity online with the Nebius architecture. In this case, some revenues are recognized when we lock this capacity, the supply chain, and the architecture, and some of the revenues are recognized when the capacity actually comes online and being sold to customers. …

SemiAnalysis @SemiAnalysis_ · Nov 12

NVIDIA doesn't own a fab. Its edge is a supply chain that took one product from $1 billion to $250 billion. Even so, it will probably lose share.

"What really keeps them in the game is supply chain. It's feeling a lot like Apple in 2020. People are perceiving them as having a lot of competition."

"A lab is not really capable of ramping a product from a billion to 250 billion dollars. NVIDIA is a one-of-one company that's done that, and there's a lot of chops that go into that."

"I do think that share gain against NVIDIA is extremely possible, and probably probable now." …

Serenity @aleabitoreddit · Nov 13

The people have spoken.

In the largest large-scale poll of 22,965 respondents:

19,750 supported @JensenHuang remaining CEO of $NVDA, compared with just 1,840 opposing him.

Among respondents expressing a position Jensen received a:

- 91.5% support vs. 8.5% opposition ratio (10.8 to 1)

The results stands in contrast to prominent media commentary calling for and celebrating his departure.

Nvidia's board should reconsider whether removing Jensen Huang was in the best interests of its shareholders and American leadership in AI

> **Serenity** @aleabitoreddit
> Okay, let's gauge individual investor and public sentiment independently. Should Jensen Huang remain CEO of $NVDA?

R **Roger** @rdd147 · Nov 12

Reuters reported today on collapse of Neo-Cloud stocks in wake of Jensen leaving.

Serious concerns arose at investment firms about Kress background and focus on investments vs bets on risk like Jensen did. Specific concerns of investors are how she'll approach...

Nvidia's equity investments in neoclouds.

GPU-backed financing and credit guarantees.

Commitments to purchase unused computing capacity.

Counterparty creditworthiness and customer concentration.

PM **Paul Millerd** @p_millerd · Nov 13

There's a weird thing I've noticed on social media wher entrepreneurs and creators always recommend building up a side income before leaving your job

Except almost none of them actually did this!

I think what's going on is that this piece of wisdom just does much better in an algorithmic feed

It appeals not only to the people that want to quit their job, but also the people that think a lot of people who are doing their own thing are naive and should stay in their jobs

If you say something like, "hey, you should just take a leap and bet on yourself and see where it goes, and not having a plan is okay"

Not only do the people that want to dunk on the self-employed ignore it, but a good majority of people that want to quit their job ignore it too because they want to buy into the fantasy that you can plan such a life transition

I suspect woo advice on taking an unconventional path is the right advice

But algorithmic feeds don't optimize for usefulness. They optimize for fantasies and projections

Quit your job, people, and embrace the beautiful adventure of doing work that calls to you!

Embrace potential failure. Be okay with doing whatever work can fund the journey. Return to your job if you have to

PD **Pavel Durov** @durov · Nov 13

🤦‍♀️ Jensen made a rookie mistake. He had a board.

In 2014, my board kicked me out for saying no to spies.

In 2026, Jensen's board kicked him out for saying yes to one.

So the board gets you either way.

Founders: Don't have a board.

Be the board 😉

x.com/durov/status/2121174800576246058

THE GOATS

GB **Gavin Baker** @GavinSBaker · Nov 12

Well-meaning, patriotic China "Hawks" who are not AI/HW experts are putting American national security at risk.

China had *zero* chance of ever catching America in AI with the export strategy that Jensen supported. Their labs would have continued training using less powerful American GPUs which meant American labs would have always been ahead given scaling laws. And in the event of a conflict, we could have simply turned off all the Southeast Asian clouds.

Simply stated, in AI terms, America had machine guns and we were giving China muskets to prevent them from developing their own machine gun variants.

Given that it looks like the China "Hawks" will get their

preferred policy, China will likely soon have a chance of catching America in AI by going down an alternate, less power-efficient AI hardware path. They almost certainly would not have gone down this path if less powerful GPUs were still available in China and via Southeast Asian clouds.

And it will be a much less stable world if China pulls even or ahead of America in AI after developing their own alternative AI HW and gives this technology to Russia, Iran and North Korea. And all of this will be possible if the China "Hawks" get their preferred policy.

x.com/GavinSBaker/status/2120966316601585854

S **Serenity** @aleabitoreddit · Nov 12

I have no confidence in the future of $NVDA after Jensen's resignation.

Beyond the next couple years of existing revenue + roadmaps.

Without Jensen's visionary leadership that previously set them ahead of $AMD to Broadcom

It's don't find Nvidia compelling in the long horizon

POST · OCT 6

Psychedelic use, for most users, is part of a cycle of persistent grief

Vivid Void @vividvoid

Vivid Void argues that for most users the psychedelic trip is a consolation prize for having lost the ability to find meaning in ordinary life, a revelation that is promised but never quite brought back. Meanwhile the chores, calls and dinner invitations that hold a life together go undone. The case is for showing up for the mundane world, frustrating family included.

GAMES

MENTAL MATH

1. 25 × 4 = ?
2. 85% of 160 = ?
3. Fermi: you read 300 words a minute for 15 minutes a day. How many days for a 60,000-word book?

MINI CROSSWORD

Across

1 The side of something that is sheltered from the wind (3)

4 A person eating a meal (5)

6 Formally making a person known to another or to the public (5)

7 Any admirable quality or attribute (5)

8 The seed of the cereal grass (3)

Down

1 A hit that flies straight out from the batter (5)

2 An item inserted in a written record (5)

3 Suggestive of the supernatural; mysterious (5)

4 Switch from a higher to a lower beam (3)

5 A state of decay usually accompanied by an offensive odor (3)

FOUR CARDS

If a parcel is marked Express, it has a red sticker.

Red sticker	Express	Standard	No sticker

Each card has one thing on each side. Which cards must you turn over to check the rule?

RIDDLE

What word becomes shorter when you add two letters to it?

End of today's paper.

Covering roughly Nov 12–13, 2026. Compiled Friday morning, ET.

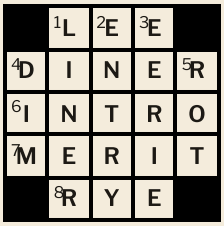

Want more or less of something tomorrow? Tell us in "Tune tomorrow's paper" at the end of the web edition.

ANSWERS

MENTAL MATH

1. **100** 25 × 4 = 20 × 4 + 5 × 4 = 100
2. **136** 10% is 16, so 85% = 8 × 16 + half of 16 = 136
3. **14 days** 300 × 15 = 4,500 words a day; 60,000 ÷ 4,500 = 13.3, so 14 days

MINI CROSSWORD

FOUR CARDS

Turn Express and No sticker. Express could hide something that breaks the rule; No sticker breaks it if the other side turns out to be Express. Red sticker can't break it (the rule never says only those cards have it), and Standard isn't covered by the rule at all. Most people pick the card that matches the rule's second half instead of the one that could falsify it.

RIDDLE

Short.
