Nvidia's board opens an independent probe into Jensen Huang; the stock slides premarket

Huang told employees he had been unfaithful to his wife, after reporting tied him to a businesswoman US authorities reportedly concluded was a Chinese intelligence asset. Nvidia's board said it has "no reason to believe" national security or company secrets were compromised and put independent directors and outside counsel in charge of an investigation; Huang said he will cooperate fully. @GavinSBaker, who has known him for almost 30 years, said he does not believe Huang would knowingly hurt America or Nvidia. China called the allegations "groundless speculation and slander," and @KobeissiLetter reported NVDA down more than 5% as premarket trading opened. X @KobeissiLetter · X @GavinSBaker · X @KobeissiLetter · X @KobeissiLetter

US data center construction spending up 90% a year, a record $96.5B rate

September data center construction ran at a record annualized $96.5 billion, up 90% from a year earlier and the biggest jump in ten years, @KobeissiLetter reported; it has nearly quadrupled since the start of 2024. Office construction fell 8% to $46.0 billion, near its lowest since 2016. Separately, @jukan05 relayed a Nikkei report that Musk's Terafab told equipment suppliers it is targeting 1 million wafers a month from 2032, 700,000 of them for memory. X @KobeissiLetter · X @jukan05

Musk: the Cybertruck line shuts in about eight months to make room for Cybercab

Elon Musk said Cybertruck orders far exceed production, and Tesla will build as many as it can before shutting the line in about eight months, returning many deposits. He said the truck is not unprofitable; the complexity simply costs more than the extra Cybercab output it would free up. X @elonmusk

🇪🇪 $NBIS 22MW Estonia AI factory live in Q4

And GUESS WHAT?

https://t.co/nsLOyJcNxv, the country's official investment promotion portal, explicitly calls this the "first Nebius deployment" ‼️

Greenergy is pursuing a grid connection expansion to 200MW.

Plenty of MW to follow.

Roger @rdd147 · Nov 8

Dumb Down version of $CRWV and $NVDA GPU ABS problem.

CoreWeave has a DDTL for project backed by $NVDA GPUs. The amount they can draw during buildout is about 50% of the true cost and 35% of what their true OpEx is. That means $CRWV needs to raise roughly 3x the amount of money outside the DDTL to meet contract terms on timed expansion. If they lose access to funding, they get behind on timing in contract for delivery of compute power and default on customer contracts who can walk, leading to ABS being called and default if the capacity isn't re-sold. ...

> **Roger** @rdd147
> $CRWV ABS loan facilities don't look like they are remotely close to being sufficient to cover the infrastructure costs associated with the...

Vebjørn @VJNCapital · Nov 8

$MSFT capital efficiency is unmatched

Their operating cash flow is around 50% higher than $META while CapEx is only 30% higher

They have 9% larger OCF than $GOOGL yet 19% lower CapEx

17% higher OCF than $AMZN while spending 46% less

As of the latest quarter they are growing OCF the fastest

What does this mean?

$MSFT is growing faster while spending less (relatively)

This is one of the key reasons I loaded up on $MSFT in the $350-$380 range earlier this year. Simply one of the best managed businesses in the world

Serenity @aleabitoreddit · Nov 9

Every AI name in Taiwan from Mediatek to Winbond looks like its limit up.

TAIEX: +4.94%, its 2nd largest daily gain in history.

I guess the market is impressed by $NVDA's Jensen Huang vitality at his age? https://t.co/brvV79PfKI

x.com/aleabitoreddit/status/2119689635869954503

Jukan @jukan05 · Nov 8

I completely agree with this take.

"Jensen may or may not step down, but dealing with family matters is going to take a tremendous amount of energy. In an industry this competitive, a CEO's attention and energy are scarce resources. The more energy Jensen puts into dealing with things at home, the less bandwidth he'll have to set strategy, execute on it, and navigate the competitive landscape."

I think NVIDIA will take a hit one way or another.

> **Herman Jin** @ShanghaoJin
> Bad marriage is like a cancer 不一定辞职，但会需要巨大精力应付家庭。在这种强度产业竞争里，CEO的注意力和精力是稀缺资源。Jensen要消耗大量心力去处理家庭事务、挤占原本公司战略、执行和外部博弈的带宽...

Deirdre Bosa @dee_bosa · Nov 8

Nvidias access to China, Southeast Asia and sovereign buyers runs through Washington and Huang has been its chief negotiator there.

A board probe into whether a Chinese intelligence asset targeted him weakens his hand in all of those talks.

x.com/dee_bosa/status/2119532496815829235

TK **The Kobeissi Letter** @KobeissiLetter · Nov 8

You can't make this up:

At 6:00 PM ET, US stock market futures opened for the first time since Nvidia CEO Jensen Huang admitted to a "relationship" with a Chinese spy.

By 6:01 PM ET, S&P 500 futures had erased an implied -$300 billion in market cap.

Then, by 6:07 PM ET, all losses were erased and S&P 500 futures turned green, adding back an implied +$350 billion in market cap as traders bought the dip.

That's a $650 billion swing in implied market cap due to a CEO's relationship.

We all just witnessed the strangest record in stock market history.

FROM YOUR X

AW **Alexandr Wang** @alexandr_wang · Nov 9

i forgot about this until @ScottWu46 reminded me, but back in january 2017 when we were 19, scott and i had lunch in SF

at lunch, we talked about how our IMO/IOI/math competition gang could be the next paypal mafia. i knew the competition kids were geniuses by any standard, and felt confident in time we could take the tech world by storm

fast forward nearly 10 years later, and many of our friends from that time are some of the most exciting people in AI and technology (@ScottWu46, @akshat_b, @chameleon_jeff, Jerry Ma, @randomjohnnyh, @0xShitTrader, @stevenkplus1, @thejessezhang, @vickie_ye_, @alexwei_, @demi_guo_, @d_m_ziegler, @hughbzhang, @_mohansolo, @MarkSellke, and many others i'm sure i'm forgetting)

i'm now at that age where i reminisce about everyone i grew up with, and i've known most of these people since middle school (via MATHCOUNTS!). even though we were scattered around the country, we would gchat about math problems and hang out on AoPS, then we did math/algo camps together, and then we did internships together.

very crazy to think about the degree of sheer brilliance of this group when we were just teenagers, and so special to see so many go on to leave their mark on the world.

note to parents: if your kid is on gchat all day solving math problems with some anonymous group of cross-country asian kids, (s)he may just turn out alright.

x.com/alexandr_wang/status/2119677603862692029

R **Riva** @rivatez · Nov 8

Many people in tech have made, or are about to make, large sums of capital. I want to make a petition for more philanthropy towards historical buildings- specifically Churches

Every year, dozens of historical Churches fall into disrepair around Europe. Hundreds of these deconsecrated buildings are up for sale

I don't believe you need to be Christian to recognise the value in saving these buildings. You just have to respect history. It is a travesty to see these buildings- that were the cradle of communities and our civilisation- fall into disrepair or even get demolished

These Churches should not become financial assets- not yoga studios, not backdrops for light shows, not a rental opportunity. We should allow them to remain as sacred spaces- the preservation of our history is enough

When you take on these sorts of projects, people will say, "Oh, but these are money drains! They will just need continuous repair- and you'll have nobody to sell them to!" Consider perhaps that in this you will find the whole point

You could save a Church for low six figures. A very wealthy person could save a lot of them. I have taken on one, and it has been one of the most beautiful and meaningful projects of my life

x.com/rivatez/status/2119514722894770572

THE GOATS

S **Serenity** @aleabitoreddit · Nov 8

Various commentary from Qualcomm, Arm, to Meta executives this week during the AI selloff:

$LITE CEO: "You had a comment from the CEO of $IREN and I'd second that. There's a massive disconnect in what we're seeing in our demand books.

And what the markets are showing. And yet you're seeing a massive, massive selloff." (Fri, Nov 6)

$AMD CEO CNBC: "We're at the very beginning of the adoption cycle, where people can see where AI and

superintelligence will take us"

"We are seeing demand being higher than supply" (Wed, Nov 4)

$ARM CEO regarding a debate whether AI infrastructure spending is about to peak:

"I think in some states where it gets harder, other states may pick it up to make it easier, but I do believe strongly that if the US hesitates in any way shape performance in terms of data center buildout...

"The rest of the world is ready and willing. There is just huge demand for this capacity. And I think globally the US really wants to be able to compete against China. China is not slowing down at all." (Thu, Nov 5)

$APLD CEO: Bank construction lending, project financing and bond markets remain available, although interest rates and credit spreads have risen

"The big risk is delivering on time." "The demand picture is extremely robust." (Mon, Nov 2)

$QCOM CEO: "It's not demand bound. It's a supply bound."

"We're short on wafers, we're short on substrate, we're short on assembly. Everything is short because demand is very, very high."

"I think what the market is reacting to is what is the speed of the compute build out."

$META on political risk: "We did have a governor that won last night who did make data centers a big part of the platform.

Say as soon as we get past the inauguration, let's meet because we don't want to lose this investment in our town. We don't want these jobs to go elsewhere." (Wed, Nov 4)

Even politicians campaigning against data centers are negotiating. But Meta's president also emphasized that starting new US DCs will become more difficult.

TLDR:
-> Extremely bullish commentary from accelerator players, networking, and semi companies
-> DC developers report strong pricing/demand, but increasingly emphasize financing, permitting and execution risks (more cautious)
-> Politicians that previously campaigned against DCs are showing cooperation

There's an important difference between demand disappearing and demand being delayed by the inability to build fast enough.

Despite the severity of the selloff, I'm not seeing evidence of widespread AI demand destruction in commentary.

DK **Daniel Koss** @daniel_koss · Nov 9

Like everyone else, I can't stop thinking about the Jensen news. It matters to me on two levels.

Professionally:

It does appear that $NVDA's criticisms around China entanglement were not completely made up. But instead of speculating, let's wait for the investigation and the facts. Most speculation on X is just people seeing what they want to be true.

A divorce, and his wife selling $NVDA shares, could create a new type of seller in the short term. It doesn't change the fundamentals or the AI trade.

Jensen having to step down, or worse, would be a different story. He isn't just a visionary. He IS NVIDIA. That would hurt $NVDA, which is the backbone of AI today.

Personally:

Jensen is maybe my favorite founder of all time. Part of his charm was one company and one wife, loyal from the start. He always spoke about her in the highest terms, never cursed, stayed positive, and seemed like the highest-integrity guy in tech.

What he does in his private life is none of my business. I don't have the details or the context.

I'm just deeply sad to hear this story.
x.com/daniel_koss/status/2119703633533014219

INVESTMENTS

Z **Zephyr** @zephyr_z9 · Nov 9

Around 20% is contributed by China if u add up renting outside China, smuggling, and legal sales.
Btw, banning Chinese companies from renting compute outside China will hit the spot market very hard.
x.com/zephyr_z9/status/2119726360046587919

B **Babyfolio** @babyfolio · Nov 8

If true, $NBIS's 25% stake in ClickHouse would be worth $14B.

That's 40% of $NBIS's current valuation, leaving $21B valuation for the core business (excluding other subsidiaries).

That said, I doubt ClickHouse would IPO at $56B in this market. I'd expect a lower valuation, but still cool to see.

x.com/babyfolio/status/2119513969031254284

POST · OCT 28

We are shooting our own foots with zoning laws

J.K. Lundblad @JK_Lundblad

Infrastructure in cities scales sublinearly with population (exponent about 0.85), while patents, GDP and incomes scale superlinearly (about 1.15). Bigger cities get more out of each person, so zoning that caps city size caps human potential.

x.com/JK_Lundblad/status/2115425008033964458

POST · NOV 3

2027 is going to be an absolutely wild year for knowledge work

Paul Millerd @p_millerd

Millerd expects more opportunity, not less, for people who learn to work with agentic coding models, and says many people are reaching out to him about letting go of a fancy work identity. His advice: don't trade your present for the future. Fear and the sense of being "behind" steal the present, which is the only place curiosity and creativity happen.

x.com/p_millerd/status/2117553790463479941

FROM YOUR OLD QUOTE BANK

You only win when you maintain your dignity.

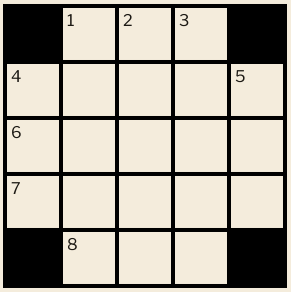

— Green Book

GAMES

MENTAL MATH

1. 16 × 6 = ?
2. 65% of 460 = ?
3. Fermi: you read 200 words a minute for 30 minutes a day. How many days for a 60,000-word book?

MINI CROSSWORD

Across

1 Major food fish of Arctic and cold-temperate waters (3)

4 The part of the alimentary canal between the stomach and the anus (5)

6 Large feline of upland central Asia having long thick whitish fur (5)

7 A person who has achieved distinction and honor in some field (5)

8 Make an effort or attempt (3)

Down

1 A room in which a lawcourt sits (5)

2 Someone who owns a business (5)

3 The process of gradually becoming inferior (5)

4 Cause to slow down or get stuck (3)

5 Actively cause something to happen (3)

FOUR CARDS

If a day's forecast says rain, the card shows an umbrella on the back.

Rain	Sunny	Umbrella	Scarf

Each card has one thing on each side. Which cards must you turn over to check the rule?

RIDDLE

What goes through cities and fields but never moves?

End of today's paper.

Covering roughly Nov 8–9, 2026. Compiled Monday morning, ET.

Want more or less of something tomorrow? Tell us in "Tune tomorrow's paper" at the end of the web edition.

ANSWERS

MENTAL MATH

1. **96** 16 × 6 = 10 × 6 + 6 × 6 = 96
2. **299** 10% is 46, so 65% = 6 × 46 + half of 46 = 299
3. **10 days** 200 × 30 = 6,000 words a day; 60,000 ÷ 6,000 = 10.0, so 10 days

MINI CROSSWORD

	1 C	2 O	3 D	
4 B	O	W	E	5 L
6 O	U	N	C	E
7 G	R	E	A	T
	8 T	R	Y	

FOUR CARDS

Turn Rain and Scarf. Rain could hide something that breaks the rule; Scarf breaks it if the other side turns out to be Rain. Umbrella can't break it (the rule never says only those cards have it), and Sunny isn't covered by the rule at all. Most people pick the card that matches the rule's second half instead of the one that could falsify it.

RIDDLE

A road.
