AI trade meltdown: Nasdaq into correction as chip and neocloud names collapse

Thursday's sell-off erased Wednesday's post-midterm rally. The S&P 500 fell about 4.4% and the Nasdaq about 5.5%, with the Nasdaq-100 posting its largest daily drop since the 2020 pandemic and the Magnificent Seven losing more than $1 trillion of market cap. Chip and data-center names led: SanDisk, Nebius, Micron, Marvell and peers plunged as traders priced slower AI infrastructure buildout. On X, @KobeissiLetter framed it as leverage meeting a sentiment flip — "fundamentally, nothing has changed" in an hour — while Nvidia briefly printed near a ~13× forward P/E, cheaper than the S&P. X @KobeissiLetter · X @KobeissiLetter · X @KobeissiLetter

GB **Gavin Baker** @GavinSBaker · Nov 5

The governor-elect of Texas, Gina Hinojosa, has explicitly said that all currently permitted datacenters in Texas will be allowed to finish construction. This essentially covers all of the 2027 and likely well into 2028.

She is going to pass laws that ensure that all *newly* permitted datacenters going forward for delivery in 2028/2029 will pay taxes, commit to no increase in power prices for consumers, don't impact water availability for people, be constructed with union labor and give "Texans a seat at the table."

Sounds reasonable. She doesn't want to lose a lot of good blue collar jobs and property taxes for small towns in rural Texas.

Datacenter commentary starts at 6:30 in this interview.

Also attaching her official campaign position from her website in the next post.

Sidenote: After watching a bunch of her speeches and interviews, I do think she is a political talent and probably has a future in national politics.

JUST IN: SpaceX needs at least $200 billion to enter wireless once you add up spectrum, towers, and antennas, according to Deutsche Telekom CEO, who says "welcome to the party"

Tim Höttges (CEO): “And by the way, I take his attempt serious. He has now bought 76 megahertz of spectrum. By the way, we have 400 megahertz. So if you now say, okay, he can buy the spectrum prospectively, do your math. These are kind of triple digit billions, which are needed to gain the spectrum position. Okay, if he has the money, go for it." …

AF **Andrew Feldman** @andrewdfeldman · Nov 5

Last week, a short seller, @CulperResearch, published a report arguing that @cerebras wafers wear out after about two years, and based on that premise the report suggested that the economics of our business are fundamentally challenged.

That number is wrong, and given that the basis of the entire report is built upon that assumption, all of the assertions that follow are also wrong.

We do agree that the question of how long our systems last is a fair question, so we want to address the topic plainly. …

A bull market makes everyone a genius

One of the most dangerous things a rising market can do is convince investors that they’ve become much better at investing than they actually are. When almost everything keeps going up, it’s easy to confuse a favorable market with good judgment. You buy a stock, it rises 50%, and naturally you assume you were right. But were you right about the business, or did someone simply become willing to pay more for it? …

FROM YOUR X

N **Naval** @naval · Nov 5

Actual progress comes from hard-to-build technology.

Which comes from competitive, creative, free-market capitalism.

Which comes from one small, precarious area and then diffuses to the rest of the world.

Snuff that out, and it's global stagnation for an extremely long time.

x.com/naval/status/2118479933530063135

N **Naval** @naval · Nov 6

The ideal passive portfolio is a broad collection of highly asymmetric long-term bets.

DS **David Senra** @davidsenra · Nov 5

Business is problems. The best companies are just highly effective problem-solving machines.

Travis Kalanick on why he loves problems:

"I don't think about problems in a negative way."

"I think about problems the way a math professor would think about a problem."

"A math professor without interesting problems to solve is a sad math professor."

"So you wanna create interesting things to solve. You wanna create problems to solve. You have to predict well the nature of the problem and your ability and capacity to solve it."

— @travisk

THE GOATS

CC **Chris Camillo** @ChrisCamillo · Nov 5

How many days until the market figures out blue states will be just as willing to accommodate data center expansion as red states? Just with tighter restrictions around electricity, water, pollution and labor. Restrictions we'll likely end up with everywhere regardless of politics.

x.com/ChrisCamillo/status/2118442120906162437

S **Serenity** @aleabitoreddit · Nov 6

Everyone's a long term investor for 2027, 2028, or 2029 onward

Until their portfolio experiences volatility months in. I still think:

- $RKLB could end up the next $SPCX

- $NBIS has the potential to be the next hyperscaler

- $SIVE has moonshot potential to be the next $LITE

- 1-3x P/E memory companies and $AXTI substrate bottlenecks are more durable than markets think

And that it's stupid to sell single digit fwd P/E AI companies or promising longs.

And rotate that into 5% growth towel resellers at 47x P/E. Or 180x cyber companies, just because they're going up.

I've seen $AMD go from the $3 valley of doom to $400 as people thought it could be the next $INTC / $NVDA.

And been through the Bitcoin $1000 -> $18,000 -> $3000 -> $100,000 cycle.

Not advice on how to position or trade, but anyone on extreme leverage during those times got wiped out.

While the underlying assets sharply recovered later.

I do think AI, Space, and Physical AI are the future.

So, I'm remaining long, and using this time to maximize exposure to the winners

x.com/aleabitoreddit/status/2118605467459199016

INVESTMENTS

AI TRADE UNWIND

TK **The Kobeissi Letter** @KobeissiLetter · Nov 5

Just to put today's crash into perspective:

After today's crash, Nvidia, $NVDA, is now trading at a Forward P/E ratio of ~13x.

That's 7 turns below the S&P 500's ~20x Forward P/E and less than one-third of Walmart's ~43x.

Ironically, the name at the forefront of the AI buildout is now one of the "cheapest" stocks in the market.

Truly incredible.

x.com/KobeissiLetter/status/2118417312524955835

TK **The Kobeissi Letter** @KobeissiLetter · Nov 6

BREAKING: Major investors are "increasingly skeptical" that Anthropic's IPO can proceed at the expected valuation of $1.5 trillion after today's market drop, per WSJ.

One major investor said Anthropic's valuation will need to come down to $1 trillion.

This marks a major reversal from the $2+ trillion closing market cap expected by markets just months ago.

Anthropic has been planning to IPO prior to Thanksgiving.

It's unclear if today's crash will impact that timeline.

x.com/KobeissiLetter/status/2118500612996243692

TK **The Kobeissi Letter** @KobeissiLetter · Nov 5

What's happening in stocks right now is crystal clear.

Fundamentally, nothing has changed over the last 60 minutes.

This is the product of record levels of leverage colliding with a sudden shift in market sentiment.

Sentiment is the ultimate driver of price.

For months, we have been commenting on the historic levels of leverage in today's markets.

This is precisely what happens when sentiment reverses in an overleveraged market.

We will have more to say on this shortly.

x.com/KobeissiLetter/status/2118367061315367316

MEMORY

J **Jukan** @jukan05 · Nov 5

Today I met with a veteran investor who argued that memory stocks are not cheap even at a P/E of 3. Below is an edited version of our conversation.

Memory LTAs are basically meaningless. The best the LTAs being signed today can do is get customers to shoulder part of the memory makers' capex. Once prices fall, customers will gladly forfeit their deposits (prepayments) and walk away from the LTAs.

Historically, whenever prices fell more than 60% from the peak, customers broke their LTAs even after signing them. So even if a 2027 shortage is certain and the stocks trade at a P/E of 3 on 2027 operating profit, 2028 operating profit is uncertain, which makes it hard to justify a higher valuation.

He went on to argue that even if 2028 operating profit were certain, we would still have to account for 2029 operating profit.

I pushed back and asked why the market doesn't discount TSMC the same way. Why does TSMC get such a high valuation? Wouldn't TSMC also take a big hit if the AI boom fades?

His answer: the problem was how violently memory prices rose in the first place.
If memory makers had raised prices in a healthy way like TSMC, it might be a different story. But because they hiked prices like a commodity, the market has no choice but to treat memory stocks like commodity stocks.

Even if memory makers stay in shortage through 2030, he said, the market will price in the risk of oversupply in 2031.

He closed his argument this way: even at 3x 2027 earnings, if memory prices fall in 2028 by enough to break LTAs, that 3x multiple on 2027 works out to 7.8 to 10x on 2028. So current valuations are not cheap.

LEVERAGE

MI **Mike Investing** @MrMikeInvesting · Nov 5

JUST IN: Leopold Aschenbrenners Fund (Situational Awareness) has reportedly officially blown up...

These are the current (now liquidated) holdings:

- $MU bought at $1,153, now $703, (-39%)
- $CORZ bought at $25.6, now $11.1, (-56%)
- $SNDK bought at $2,268, now $874, (-61%)
- $NBIS bought at $273, now $121, (-55%)
- $CRWV bought at $99, now $42, (-57%)
- $BE bought at $301, now $165, (-45%)

Use him as a lesson why you NEVER over-leverage into high risk positions.

That concludes an end of an era...

WORTH READING

PM **Paul Millerd** @p_millerd · Nov 3

2027 Is going to be an absolutely wild year for knowledge work

I actually think there will be far more opportunity in terms of jobs, but you are going to have to work with agentic coding models. It's still early so a lot of stuff isn't abstracted away

I have had a surprising amount of people reach out to me in the last 2 months, wanting to just talk with somebody who's gone through letting go of a fancy work identity

The good news is that many people get to a spot where they feel happier about work. Does that mean a guaranteed path to always making money in a very stable and secure way? No. But it does mean there are far more ways to work in today's world and be satisfied with that

I think the key is to not trade your present for the future. Fear and worry. And the sense that you are "behind," are always stealing your present. And the present is the only way you can actually channel curiosity or creativity - the best way to embrace an emergent path

POST · SEP 28

Volatility isn't the enemy; permanent loss is

Chris Camillo @ChrisCamillo

Camillo argues Wall Street sold long-term investors on equating volatility with risk, then sold them "low-vol" products. For decade-scale wealth building, 50%+ drawdowns aren't the real enemy — permanent capital loss is. The goal is maximizing long-term wealth without enough risk to blow yourself up, not the smoothest path.

x.com/ChrisCamillo/status/2104637440556159067

THREAD · OCT 25

Short payback ≠ great equity return on AI infrastructure

Rose Celine @realroseceline

A careful walk through why recovering equipment cost quickly is not the same as earning an attractive return on the full economic life of AI infrastructure. Financing, timing of cash flows, replacement spend and who captures value (infra vs applications) can leave common equity with mediocre outcomes even when the physical assets "work."

x.com/realroseceline/status/2114359601516953992

GAMES

MENTAL MATH

1. 28 × 4 = ?
2. 85% of 960 = ?
3. Fermi: a resting heart beats about 75 times a minute. Roughly how many beats in a year?

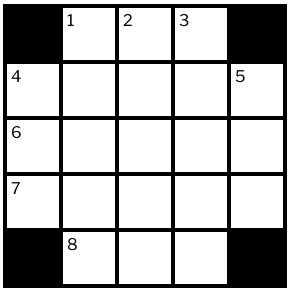

FOUR CARDS

If a card is red on one side, it has a circle on the other.

Red	Square	Circle	Green

Each card has one thing on each side. Which cards must you turn over to check the rule?

MINI CROSSWORD

Across

1 A pedal that controls the throttle valve (3)

4 An object shaped like an equilateral triangle (5)

6 Place in a grave or tomb (5)

7 React to in a certain way (5)

8 To make a mistake or be incorrect (3)

Down

1 A kind of literary or artistic work (5)

2 Cause to change; make different; cause a transformation (5)

3 An indication of potential opportunity (5)

4 The site of an archeological exploration (3)

5 The creation of beautiful or significant things (3)

RIDDLE

What has keys but can't open a single lock?

End of today's paper.

Covering roughly Nov 5–6, 2026. Compiled Friday, ET. Links are in the web edition.

ANSWERS

MENTAL MATH

1. **112** 28 × 4 = 20 × 4 + 8 × 4 = 112
2. **816** 10% is 96, so 85% = 8 × 96 + half of 96 = 816
3. **about 39 million** 75 × 60 × 24 × 365 = 39,420,000

MINI CROSSWORD

■	1 G	2 A	3 S	■
4 D	E	L	T	5 A
6 I	N	T	E	R
7 G	R	E	E	T
■	8 E	R	R	■

FOUR CARDS

Turn Red and Square. Red could hide something that breaks the rule; Square breaks it if the other side turns out to be Red. Circle can't break it (the rule never says only those cards have it), and Green isn't covered by the rule at all. Most people pick the card that matches the rule's second half instead of the one that could falsify it.

RIDDLE

A piano.
