FROM YOUR X

KaizenInvestor @Kaizen_Investor · Oct 31

My thoughts on the AI trade, mainly coming from my experience as a commercial manager.

We have over 600 customers in the 3 countries I'm responsible for. It goes from multinationals to small enterprises and family businesses.

They all feel the same thing: it is not going well

Ren @ren_stocks · Nov 1

$GOOGL $META $MSFT $SPOT

Look closely at this chart.

In software, revenue has pulled away from flat or falling headcount.

Finance and consulting aren't there yet, but Bank of America is starting to show the same gap.

It'll take longer outside tech, but this IS the trend that will keep compounding. The more companies reap the rewards of AI, the more they'll invest in it.

This is, all things considered, the most probable future. I'm investing accordingly.

Rafe Fletcher @fletcher_rt · Nov 1

Only if we still view AI as a language-generation tool. Producing plausible but empty prose is where it is useless.

So in big businesses it amplifies bureaucracy. When busyness is how you measure utility - pointless meetings, emails etc get drawn out as it proliferates the slop.

But when you have autonomy and agency, it is fantastic. As a small business owner, I link it into Xero & CRMs, and instantly identify priorities. Embedded into email too, AI understands context and stops days becoming about clearing inboxes & helps focus on what's actually important.

AI reflects our existing structures. And where those structures are superficial, it is pain in the arse. But without those burdens, it's a brilliant leveller and dispenses with a lot of onerous crap.

Tom Nash @iamtomnash · Nov 1

If you want to get better returns do this exercise every time the market is red:

Every time that a stock is down, check if the business or overall fundamentals changed, or if this is just market noise.

Once you learn this way of thinking, anxiety goes away and investing becomes easy.

Bill Ackman says Neuralink and other brain-computer interfaces will let the blind see again within "not too many years"

"And you know, my daughter, who lost pretty much basic function, ability to walk, ability to speak, ability to see, is regaining function. She's cognitively, as far as I can tell, fine. She's relearning how to speak, and she's learning again how to walk. And I'm confident we're going to get her back."

"Biggest challenge right now is that the optic nerve damage from the pressure on the brain has caused her to lose probably 98% of her vision."

"But even there I'm optimistic. Spent a lot of time in the last few months meeting with all these brain computer interface companies, obviously Neuralink being the most famous, but there's some other very promising lower intervention technologies."

"And this will be a period, you know, AI is going to enable us. We're going to be able to get more signal from the brain, and we're going to be able to interpret that signal much more effectively than we had before. And the blind will see again, and people who have not been able to walk, so to speak, paraplegics, I believe will walk again. It's a matter of not months but years, but not too many years."

THE GOATS

Paradis @ParadisLabs · Oct 31

Absolutely insane...

HFs have pulled back gross exposure by ~8% -- the most aggressive de-grossing in at least ten years -- according to Morgan Stanley's Prime Brokerage data.

In addition, TMT-focused HFs lost ~12% in October with losses concentrated in crowded Tech names --

Paul Graham @paulg · Nov 1

Ridiculous looking haircuts are not a modern phenomenon. Indeed you can pretty much assume that the most fashionable haircut now will look ridiculous later in photographs.

MEMORY & CHIPS

Daniel @danielisdizzy · Oct 31

$AMD will generate more than $100B in annual revenue from server CPUs alone by 2030.

Lisa Su expects the server CPU TAM to reach $220B by 2030, with AMD capturing more than 50% of that market.

And I wouldn't be surprised if the opportunity turns out to be even bigger.

Just look at how aggressively AMD has raised its server CPU TAM projections for 2030:

- November 2025: $60B
- Q1 2026: $120B
- October 2026: $220B

$60B → $120B → $220B.

50% of $220B = $110B in annual revenue for AMD.

From CPUs alone.

And that doesn't even include the massive opportunity in GPUs.

For context, AMD generated approximately $41B in total revenue over the last 12 months.

The explosion of AI agents will unleash an unprecedented surge in CPU demand.

AI agents don't just generate responses. They execute code, interact with applications, process data, and coordinate complex workflows.

As billions of AI agents begin operating autonomously, server CPU demand will explode.

$AMD will be one of the biggest beneficiaries of the agentic AI revolution.

POSITIONING

Paradis @ParadisLabs · Oct 31

Insights from GS Prime Brokerage:

1. Info Tech was the most net-bought sector this week, driven mainly by short covers while long buys remain relatively weak.

2. Info Tech stocks are still heavily net sold MTD. This week's net-buying through to Thursday represents just ~40% of what HFs had sold in the previous 3 weeks.

3. Mag 7 stocks were net sold from Tuesday to Friday last week, highlighting risk-off sentiment.

4. Semis & Semi Equip (long buys), Software (short covers), and Tech ETFs (short covers) were the most net-bought Tech subsectors this week.

5. Goldman Sachs:
"While the directional engine of this market remains intact (token demand + GW/DC build-outs), the market has become much more discerning around the linearity of this story beyond CY27, pressuring multiples across the board until visibility improves, while investors are struggling to find names to rotate into outside of Semis/AI that are less susceptible to daily AI disruption volatility – cue names like IBM, AAPL, SPOT, V/MA, EBAY, LYV all trading well on the week/month."

TECH & AI

J **Jukan** @jukan05 · Nov 1

Taiwanese media: Intel's EMIB has an overall yield of approximately 60–65%, but the process of embedding silicon bridge dies into ABF substrates has a yield of only around 25–30%. This is significantly below TSMC's CoWoS yield of roughly 98%.
